

SIMONE CAPPIELLO

AI ENGINEER

+39 3892830558 — simonecapp7770@gmail.com — github.com/eno-sim — linkedin.com/in/simone-cappiello-422312186

PROFILE

With a B.Sc. in Computer Engineering and an M.Sc. in Data Science and Machine Learning, I currently work as a Data Engineer at Logistics Reply, building ETL pipelines and managing Oracle SQL databases. Outside of my day job, my core technical focus is designing end-to-end AI pipelines, from data ingestion and retrieval through to output evaluation, backed by a solid understanding of the math and algorithms underlying AI systems. I try to stay as up to date as possible with the fast-moving AI landscape, and I take particular care in evaluating the systems I build to ensure they perform reliably in practice.

TECHNICAL SKILLS

- **Applied AI:** RAG, Prompt Engineering, Model Context Protocol (MCP), AI-Assisted Development (Pi Agent)
- **Programming Languages:** Python, R
- **Backend:** FastAPI, Node.js
- **Databases:** PostgreSQL, Oracle SQL, MongoDB, ChromaDB
- **Cloud & DevOps:** AWS, Docker, Git, Linux Bash Scripting

LANGUAGES

- Italian (Native), English (C1), Spanish (A2)

EDUCATION

Laurea Magistrale in "Data Science and Scientific Computing" 2022 – 2025

Curriculum: Foundations of AI and Machine Learning

Università degli Studi di Trieste

Grade: 110/110 Cum Laude

Laurea Triennale in "Ingegneria Elettronica e Informatica"

2018 – 2022

Curriculum: Applicazioni Informatiche

Università degli Studi di Trieste

Grade: 95/110

EXPERIENCE

Data Engineer

January 2025 – Present

Logistics Reply

- Worked on Click Reply, a Warehouse Management System (WMS), using Oracle PL/SQL and Linux shell scripting to develop business requirements.
- Optimized the execution time of Oracle PL/SQL procedures and queries.
- Acquired practical domain knowledge in supply chain and logistics operations.

Data Engineer Internship

October 2024 – December 2024

Avancia Technology

- Built custom ETL pipelines using Oracle PL/SQL procedures and shell scripts within Linux and Docker environments.

Research Assistant

March 2024 – June 2024

Machine Learning Lab, Università degli Studi di Trieste

- Helped research team with a project about AutoML for anomaly detection using clustering algorithms.

RELEVANT PROJECTS

- **Multi-Agent Programming:** Built a Python framework integrating OpenAI and Gemini APIs to enable collaborative LLM agents to solve coding tasks.
- **DocMind – AI Document Search & Q&A System:** Built a local, AI-powered document search and Q&A system using FastAPI, ChromaDB, and hybrid BM25 + vector retrieval; integrated Whisper and OpenCV for multimodal audio/video ingestion, and the Claude API for natural-language question answering.
